Tasks

- **1** Verify the IP address of the otlab-student workstation.
- **2** Determine the subnet range of the network where the otlab-student workstation is deployed.
- **3** Discover the IP address, MAC address, and vendor information of other active hosts within the network.
- **4** Identify open ports and available services on the OT-ICS host over both TCP and UDP protocols.
- **5** Obtain the authentication credentials and log in to the user management and access control interface of the OT-ICS host. Hint: Weak authentication mechanism. ##### Note: The plc-hmi is based on Conpot, which remaps standard protocol and service ports to non-privileged ports. Refer to the link for a list of some default and remapped ports.

Tools

- These are the tools available on the otlab-student workstation for completing OTLab 07: ifconfig, masscan, netdiscover, and nmap..

Nomenclature

- ICS: Industrial control system.
- IP: Internet protocol.
- MAC: Media access control.
- OT: Operational technology.
- TCP: Transmission control protocol.
- UDP: User datagram protocol.
